

Dr. Francesco Fiorentino is a molecular biologist. He is founder and CEO of GENOMA, a private molecular genetics laboratory which is now one of the largest specialized provider of genetics services.

Francesco is actively involved in Preimplantation Genetic Diagnosis (PGD) and the study of human oocytes and embryos, since almost two decades. His laboratory has a strong translational emphasis and is actively involved in the development of new techniques for improving the success rates of in vitro fertilization (IVF) treatment.

Dr. Fiorentino is author of more than 40 peer-review papers and book chapters.
